

Effective June 1, 2026

Construction of the future “East Fill Taxiway” and future Terminal D development will require changes to vehicle service roads in this area of the airfield. Drivers must use caution and follow all signage, and designated service roads.

- The service road shown in **GREEN** will be the new reroute around the future construction area. Various barricades will be placed along the new service road to keep traffic on the approved path.
- The existing service road in **RED** is permanently closed to vehicle traffic with barricades and signage in place.
- The existing service road shown in **BLUE** will remain open with no changes.

Additional service road changes, including a new haul route, are expected beginning June 15, 2026. Please monitor future AOA Alerts for additional updates.
